INDICATIVE RESEARCH PROJECTS

Legal Jarvis AI Labs Private Limited | Sponsored Research with Sree Eshwar College of Engineering, Coimbatore

Legal Jarvis is building India's leading legal intelligence platform, combining a proprietary legal taxonomy, Indian court conventions, and applied AI to automate end-to-end petition drafting and research for advocates and law firms. We invite Sree Eshwar College of Engineering to participate in our Sponsored Research Programme, under which select faculty and students will work on industry-grade projects with real production impact, mentorship from the Legal Jarvis engineering team, and access to enterprise compute infrastructure.

Initial Projects on Offer (Semester 1)

Project 1 | Indian Legal Corpus Builder. Build a clean, structured corpus of Indian judgments and orders aggregated from public sources, with metadata extraction, deduplication, and storage at scale. Forms the foundational data layer for every downstream model. *Domain: data engineering, web scraping, NLP preprocessing.*

Project 2 | Petition Retrieval Engine (RAG). Design and deploy a semantic retrieval system over a large corpus of legal documents, using fine-tuned legal embeddings and a production vector database, integrated via API into the Legal Jarvis drafting workflow. *Domain: information retrieval, embedding models, vector databases, API engineering.*

Project 3 | Statutory Section Classifier (BNS / BNSS / BSA). Train a multi-label classifier that maps fact patterns to applicable provisions of the Bharatiya Nyaya Sanhita, Bharatiya Nagarik Suraksha Sanhita, and Bharatiya Sakshya Adhiniyam, benchmarked against current API baselines and deployed as a callable service. *Domain: applied NLP, transformer fine-tuning, multi-label classification, model serving.*

What the Institution Receives

Direct industry mentorship from Legal Jarvis engineering and product teams. Access to enterprise-scale GPU workloads via the Institution's existing AI laboratory. Honoraria for participating students and faculty mentors on completion of milestones. Joint authorship rights on academic publications subject to the Sponsored Research Agreement. Industry case-study and PR rights subject to Legal Jarvis approval. Pathways for high-performing students to internships and full-time roles at Legal Jarvis.

Engagement Model

Each project is a one-semester engagement (four to six months) for a team of two to three students under a designated faculty mentor. Each is governed by a project-specific Sponsored Research Agreement covering scope, deliverables, milestones, IP assignment, honoraria, and publication rights. A Memorandum of Understanding between the Parties shall set the umbrella terms under which individual projects are taken up.

Next Steps

Detailed project specifications — precise scope, technical stack, compute requirements, deliverables and milestones, dataset access, IP and publication terms, honoraria, and timelines — shall be shared upon execution of the Mutual Non-Disclosure Agreement and the Memorandum of Understanding. Interested faculty and students may thereafter be introduced to Legal Jarvis project leads for kick-off.
